Instructions

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions.
- Answer the questions in the spaces provided – *there may be more space than you need.*
- **Calculators may not be used.**
- Diagrams are **NOT** accurately drawn, unless otherwise indicated.
- You must **show all your working out.**

Information

- The total mark for this paper is 80
- The marks for **each** question are shown in brackets – *use this as a guide as to how much time to spend on each question.*

Advice

- Read each question carefully before you start to answer it.
- Keep an eye on the time.
- Try to answer every question.
- Check your answers if you have time at the end.

AE , DBG and CF are parallel.

$DA = DB = DC$.

Angle $EAB = \text{angle } BCF = 38^\circ$

Work out the size of the angle marked x .

You must show your working.

Angles ABD and CBD are 38° (alternate angles)

Angles BAD and $BCD = 38^\circ$ (angles at base of isosceles triangle)

Angles BDC and $ADB = 104^\circ$ (angles in a triangle sum to 180°)
 $[180 - 38 - 38]$

$x = 152^\circ$ Angles around a point sum to 360°

- 4 Gary drove from London to Sheffield.
It took him 3 hours at an average speed of 80 km/h.

Lyn drove from London to Sheffield.
She took 5 hours.

Assuming that Lyn
drove along the same roads as Gary
and did not take a break,

- (a) work out Lyn's average speed from London to Sheffield.

$$\text{speed} = \frac{\text{distance}}{\text{time}}$$

$$80 = \frac{d}{3}$$

$$d = \underline{240 \text{ km}}$$

$$\text{speed} = \frac{\text{distance}}{\text{time}}$$

$$= \frac{240}{5}$$

$$= 48 \text{ km/h}$$

..... 48 km/h
(3)

- (b) If Lyn did **not** drive along the same roads as Gary, explain how this could affect your answer to part (a).

The distance would change.

5 In a company, the ratio of the number of men to the number of women is 3:2

40% of the men are under the age of 25

10% of the women are under the age of 25

What percentage of all the people in the company are under the age of 25?

3:2
men: women \therefore 60% men, 40% women.

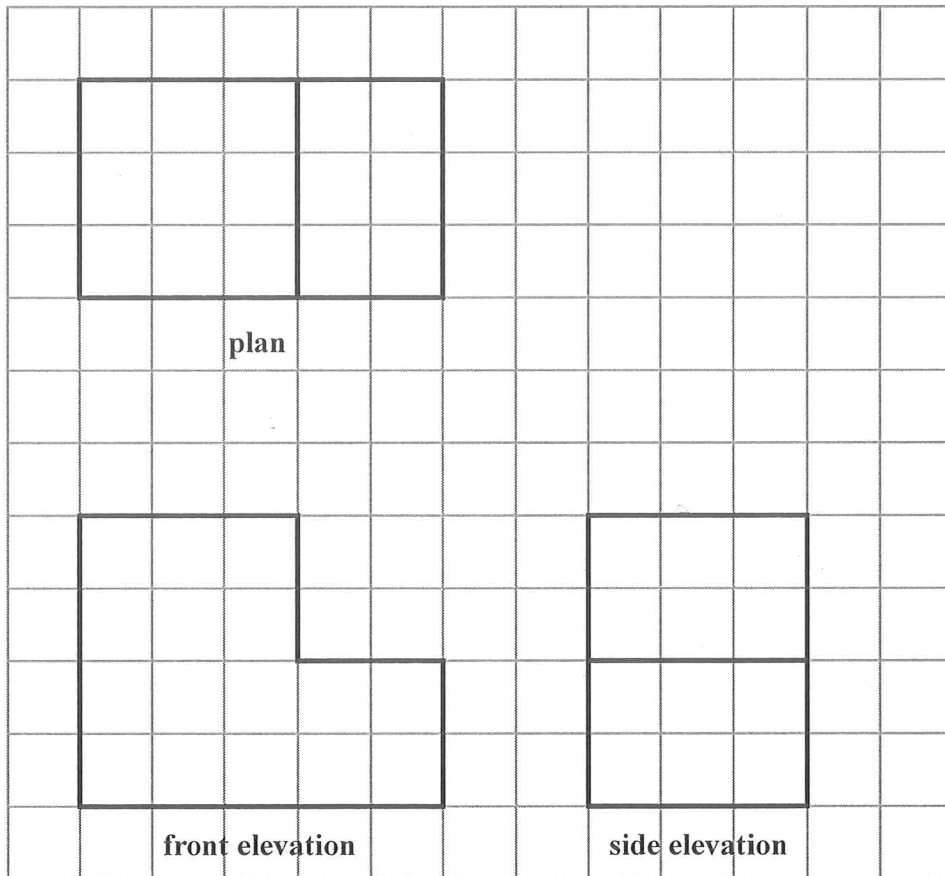

Men 40% of 60%
 $0.4 \times 60 = 24\%$

Women 10% of 40% = 4%
[0.1 x 40]

24 + 4 28 %

7 There are 1200 students at a school.

Kate is helping to organise a party.
She is going to order pizza.

Kate takes a sample of 60 of the students at the school.
She asks each student to tell her **one** type of pizza they want.

The table shows information about her results.

Pizza	Number of students
ham	20
salami	15
vegetarian	8
margarita	17

Work out how much ham pizza Kate should order.

Write down any assumption you make **and** explain how this could affect your answer.

For 60 students $\xrightarrow{\div 3}$ 20 ham pizzas
For 1200 students $\xrightarrow{\div 3}$ 400 ham pizzas

- The sample is representative of the school.
- The students all want a whole pizza.

8 Here is a parallelogram.

Work out the value of x and the value of y .

opposite angles in a parallelogram are equal:

$$5x - 20 = 2x + 43$$

$$\begin{array}{r} -2x \\ \hline 3x - 20 = 43 \end{array}$$

$$\begin{array}{r} +20 \\ \hline 3x = 63 \end{array}$$

$$\begin{array}{r} \frac{3x}{3} = \frac{63}{3} \\ \hline x = 21 \end{array}$$

Co interior angles sum to 180° .

$$2x + 43 + 4y - 5x = 180$$

$$2(21) + 43 + 4y - 5(21) = 180$$

$$42 + 43 + 4y - 105 = 180$$

$$4y - 20 = 180$$

$$4y = 200$$

$$y = 50$$

- 15 In a shop, all normal prices are reduced by 20% to give the sale price.

The sale price of a TV set is then reduced by 30%.

Mary says,

“30 + 20 = 50, so this means that the normal price of the TV set has been reduced by 50%.”
